

STUDENT ADMISSION PORTAL

FRONT END DEVELOPMENT FRAMEWORKS AND UI ENGINEERING

Abstract

The Student Admission Portal is a web-based system designed to streamline and automate the admission process in educational institutions. Traditional admission methods rely on manual procedures such as paper-based forms and in-person submissions, which are time-consuming, inefficient, and prone to errors. These methods often lead to data duplication, delays in processing applications, and challenges in maintaining accurate records, highlighting the need for a centralized and digital solution.

.The proposed system provides an online platform where students can register, fill out application forms, upload required documents, and track their application status in real time. Administrators can review applications, verify details, manage student records, and generate reports through a secure interface. Overall, the system reduces paperwork, improves accuracy, enhances transparency, and saves time, offering a user-friendly and efficient solution for modernizing the admission process.

Module details

2520030440 – Frontend & User Features: Responsible for designing and developing the user interface using React.js and related technologies. Implements the application form for data entry, eligibility checking logic, and document upload interface. Develops the fee payment mock system and status tracking feature to display real-time updates. Also handles the student profile section and notification display, ensuring a responsive and user-friendly experience.

2520030159 – Backend & Admin Features: Responsible for building server-side logic using Node.js and Express.js. Develops REST APIs for handling student data, authentication, and application processing. Designs and manages the database (MySQL) for storing records securely. Implements the admin panel for reviewing and managing applications. Handles offer letter generation in PDF format and performs API testing using Postman to ensure proper functionality.

Module Mapping

2520030440 Eligibility Check
2520030440 Document Upload
2520030440 Fee Payment (Mock)
2520030440 Application Status Tracker
2520030440 Student Profile
2520030159 Notifications (UI)
2520030159 Admin Panel
2520030159 Offer Letter PDF
2520030159 API DevelopmentTesting
2520030159Database Management
2520030159 Authentication & Data Handling

Problem statement

Educational institutions face difficulties in managing student admissions manually, leading to errors, delays, and inefficient record handling.

Our Student Admission Portal is unlike other admission systems because it includes smart features like admission prediction, automatic duplicate detection, and real-time guidance to make the admission process faster, smarter, and more user-friendly.

Thank you
