1. Abstract – Student Admission Portal

The Student Admission Portal is a web-based system designed to streamline and automate the admission process in educational institutions. Traditional admission methods rely on manual procedures such as paper-based forms and in-person submissions, which are time-consuming, inefficient, and prone to errors. These methods often lead to data duplication, delays in processing applications, and challenges in maintaining accurate records, highlighting the need for a centralized and digital solution.

The proposed system provides an online platform where students can register, fill out application forms, upload required documents, and track their application status in real time. Administrators can review applications, verify details, manage student records, and generate reports through a secure interface. Overall, the system reduces paperwork, improves accuracy, enhances transparency, and saves time, offering a user-friendly and efficient solution for modernizing the admission process.

2. Module Mapping

(Provide details of how modules are divided among team members.)

Module Name	Assigned Roll Number		Signature
Application Form	2520030440		
Eligibility Check	2520030440		
Document Upload	2520030440		
Fee Payment (Mock)	2520030440		
Application Status Tracker	2520030440		
Student Profile	2520030440		
Notifications (UI)	2520030159		
Admin Panel	2520030159		
Offer Letter PDF	2520030159		
API Development Testing	2520030159		
Database Management	2520030159		
Authentication & Data Handling	2520030159		

3. Module Details

(Explain the responsibility of each student concerning their assigned module.)

2520030440 – Frontend & User Features:

Responsible for designing and developing the user interface using React.js and related technologies.

Implements the application form for data entry, eligibility checking logic, and document upload interface.

Develops the fee payment mock system and status tracking feature to display real-time updates. Also handles the student profile section and notification display, ensuring a responsive and user-friendly experience.

2520030159 – Backend & Admin Features:

Responsible for building server-side logic using Node.js and Express.js. Develops REST APIs for handling student data, authentication, and application processing. Designs and manages the database (MySQL) for storing records securely.

Implements the admin panel for reviewing and managing applications. Handles offer letter generation in PDF format and performs API testing using Postman to ensure proper functionality.

4. Frameworks / Platforms / Software Used

(List the frameworks, libraries, platforms, or tools you plan to use.)

The following technologies and tools are used to develop the Student Admission Portal:

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), React.js
- **Styling:** Bootstrap / Tailwind CSS
- **Backend:** Node.js, Express.js
- **Database:** MySQL (optional)
- **API Communication:** REST APIs, Axios
- **Routing & State Management:** React Router, Context API / Redux
- **Storage:** LocalStorage
- **API Testing:** Postman
- **Package Manager:** npm
